# TIGER ENTERPRISE

**Coming from Logo Business Solutions, the market leader in application software exclusively for business leaders!**

TIGER ENTERPRISE - Logo Business Solutions, with more than 1.2 million users at 170.000 companies in Turkey and its exports to over 30 countries across the globe, presents the ERP software supporting the sustainable efficiency of big businesses as the best solution for international standards!

## **UNITE YOUR FORCES WITH TIGER ENTERPRISE FOR BETTER EFFICIENCY!**

Today's fast and ever-challenging competition and the need for reduced lead times, customer-focused approaches, lower costs - and last but not the least - higher quality, all require a brand new line of attack. "Quick access to information," the most valuable asset needed by a company to cope with this new kind of reorganization, calls for a culture in which all companies in the supply chain are working in sync. Modern solutions offered by information technologies bring about significant benefits in reaching high-quality and high-performance targets - indispensable to competitive advantage.

ERP software, developed by Logo with this goal in mind, is a business management system that assists competitive companies in reaching their targets.

TIGER ENTERPRISE not only optimizes internal processes owing to its purchasing, production and sales logistics features as well as its basic support to planning, finance and human resources management - but effectively boosts your engagement in supplier-customer relations.

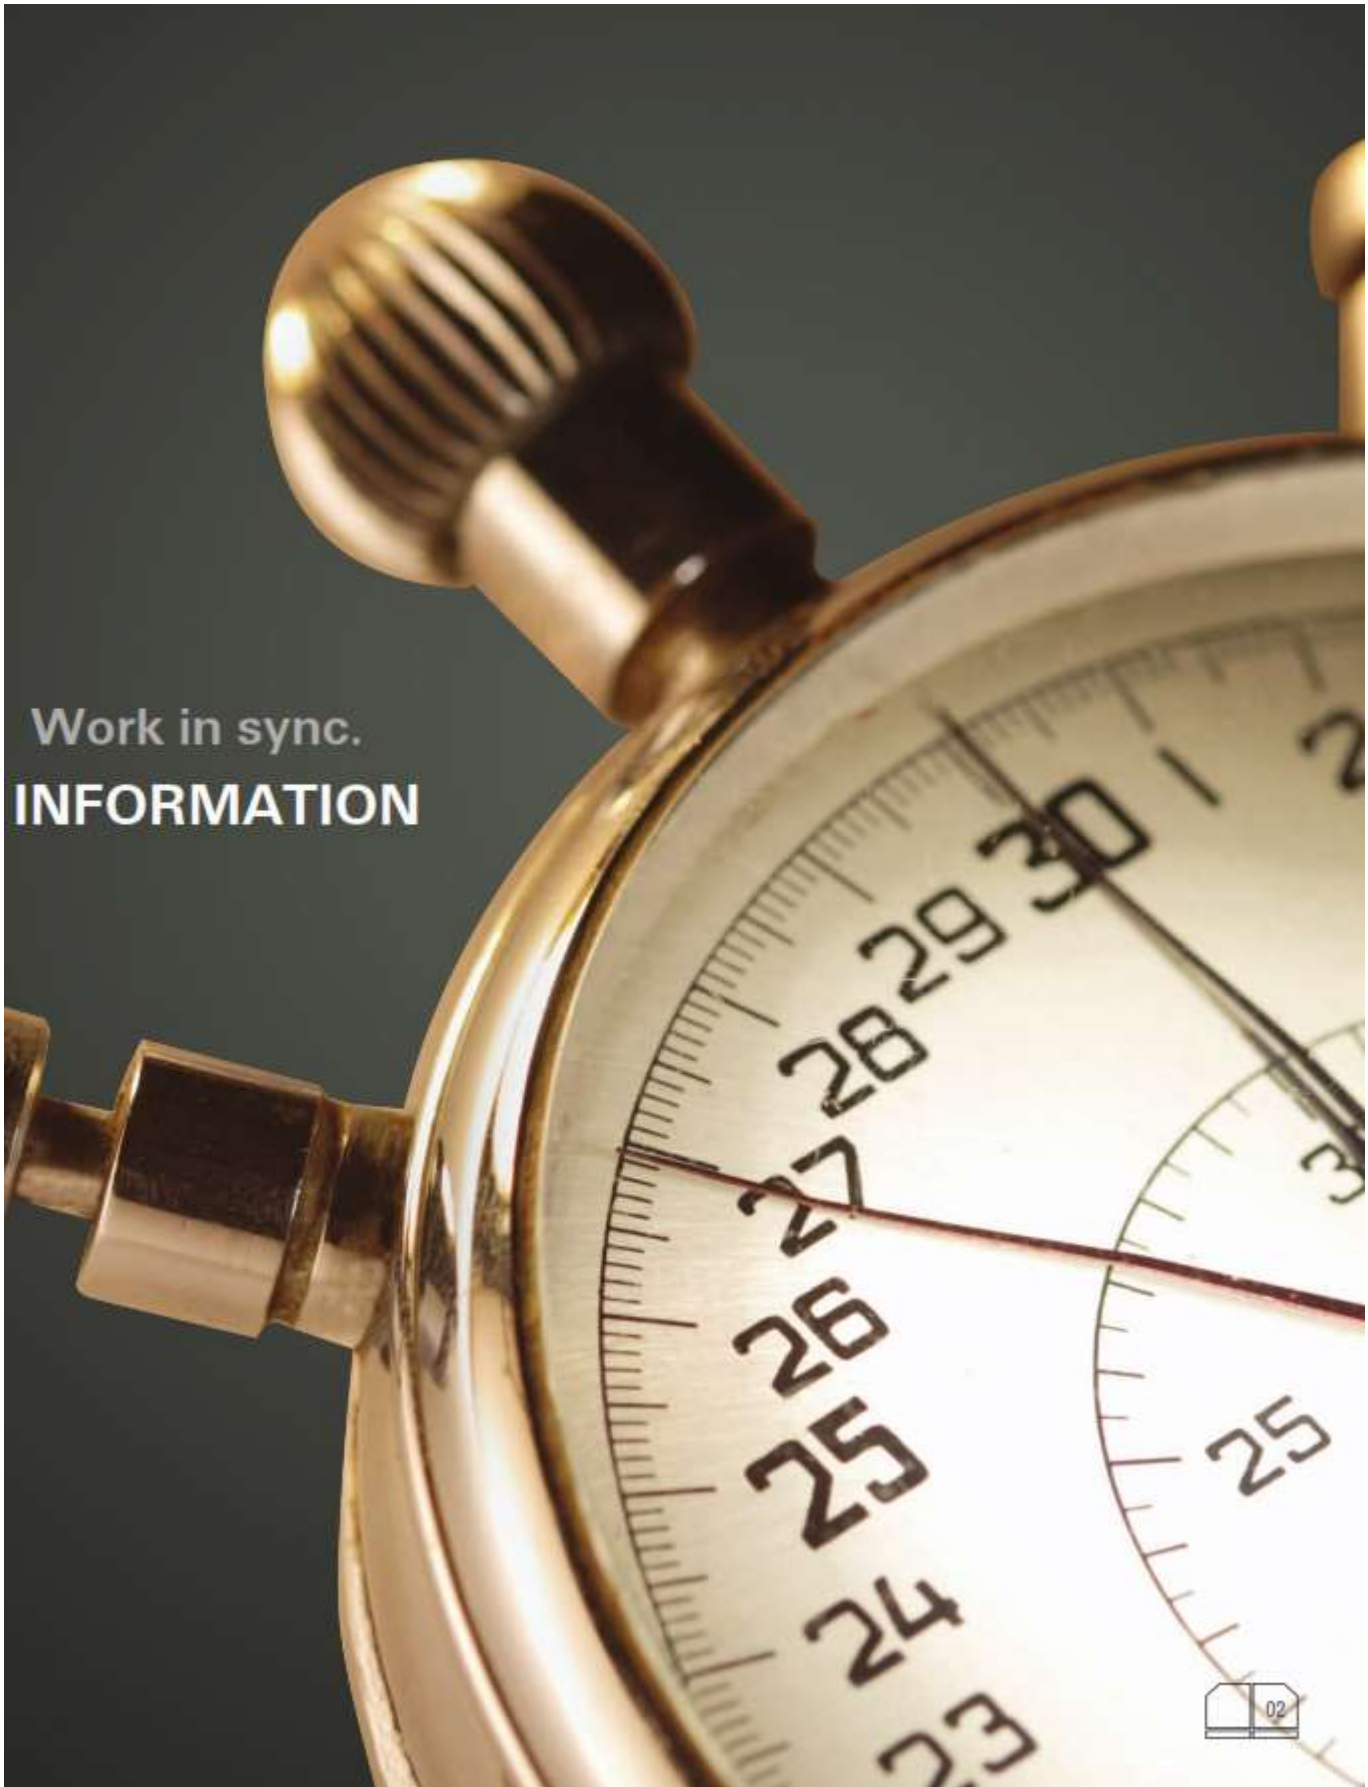

Know-how and expertise of more than 25 years.

## **QUICK ACCESS TO**

**Boost effectiveness.**

Work in sync.

# EXPERTS' CHOICE

Always unite your forces with the best for better efficiency.

## Begin the race one step ahead – thanks to Tiger Enterprise!

A company moving into global markets and pursuing activities on an international scale in a globalized economy must have an ERP that supports international accounting standards and that offers a multi-lingual, multi-currency, flexible reporting structure, totally backed by a broad vision. Owing to its local features – a veritable showcase of Logo's 25 plus years of experience – this software set off a near perfect solution advantage highly capable of responding to all challenges in a company's primary market in addition to supporting the company globally.

**TIGER ENTERPRISE** offers solutions that yield maximum benefits to all processes from creating demands in the market to aftermarket services. Currently in use in hundreds of businesses, **TIGER ENTERPRISE**, with its adaptability feature, offers the kind of flexibility that's capable of meeting all the needs of a company willing to make the most of its resources. This application is offered as a fully integrated and complete product with complementary solutions created by more than a hundred solution partners and by "turn-key projects" designed according to business needs in association with unique specialized project teams.

**TIGER ENTERPRISE** responds to all layers in a company's value chain, extending from suppliers to end users. Thanks to the modules in **TIGER ENTERPRISE** application software, you can integrate all your business processes, enjoying a complete ERP solution. Greatly enhance the scope of your solutions by adding new functions you may need

as your company grows and as new opportunities open up.

**TIGER ENTERPRISE** is a user-friendly, open platform, whose solutions complement each other. Depending on the enterprise, the application may be tailored fast and easily, thus evolving from a standard application into a customized solution, unique to you or your industry.

**TIGER ENTERPRISE** supports a client-server architectural configuration offering a scalable network architecture. Thanks to its distributed architecture set up by developing stored procedures and trigger mechanisms, this application software makes the most of your server system's data storage capabilities as well as its processor potential. Stored procedures and trigger mechanisms developed on a platform basis ensure optimal data process operations.

Due to its Web-compatible structure, **TIGER ENTERPRISE** may be used online, and it supports mobile technologies as well. Access various services offered by this application over the Internet even when you're away from your office.

The software and methods used in product infrastructures are constantly reviewed with necessary improvements made in product development processes according to ISO 9000:2000 Quality Management Systems. This application's intrinsic integrity and capability is backed by ISO quality standards.

## High Performance

## Highly adept at observing laws and business protocol

### Take your office with you wherever you go...

Business today is not strictly confined to office environs, but operations are carried out daily with banks, business partners and many more players.

**TIGER ENTERPRISE** offers unique, fast and affordable solutions such as **TIGER ENTERPRISE** Web and LogoConnect to meet these needs.

**TIGER ENTERPRISE** Web is capable of running many features of **TIGER ENTERPRISE** on the Web. For sprawling businesses with operations in various locations or in situations where remote access is a must, this application offers a development platform,

allowing fast and reliable access to information and ensuring effective data exchange.

LogoConnect allows you to easily manage your inter-company business processes and especially those with your business partners, suppliers and banks.

You can transfer data such as orders, waybills, invoices and price lists, thanks to LogoConnect. LogoConnect helps you get rid of facsimile and telephone traffic, facilitating error-free access to your documents and reports from the original source.

### **TIGER ENTERPRISE offers you;**

- Quick commissioning by your company,
- Supports multi-faceted planning and control for a company with business activities at multiple locations,
- Easily exchanges data with external systems,
- Is open to new developments and may be easily and quickly adapted to user needs,
- Displays a high performance in the face of increasing work and data load,
- Is capable of responding to all kinds of potential needs owing to its local and widespread business partnership structure,
- May be integrated with in-house software products developed by your company,
- May be applied at once, or, if requested, is capable of supporting a modular structure in line with your needs,
- Allows users to easily design different reports, thanks to its flexible reporting features,
- Provides reporting and foreign language support for international companies as well as for importers and exporters,
- Allows user-friendly operations, thanks to its interface quality,
- Allows a history of all movements and operations,
- Is capable of running on the Internet and supporting mobile technologies and
- Is highly adept in terms of applicable laws and business protocols.

**an effective ERP solution.**

# EXPERTS' CHOICE

Always unite your forces with the best for better efficiency.

Each integral part is in harmony with the other.

TIGER ENTERPRISE is made up of several fully integrated modules built to handle the most wide-ranging needs. Thanks to this integration, data is entered into the system only once, and all users have direct access to current data depending on their authorization levels. Data input to the system is controlled and guaranteed, complying with all limits, so that updates are automatically performed. Therefore, a common language is achieved between departments and processes; processes become clearer, eventually bringing about considerable cost advantages.

**Effective Supply Chain Management for Customer Satisfaction!**

The supply chain is the entire operational network that delivers your products and services to your customers. A key structure, an effective supply chain opens the door to competitive advantages for any business where all logistical processes are systematically monitored – from purchasing raw materials to product delivery to end users – and facilitated by a boost in efficiency and earnings. Due to today's dynamic information age, networks in a supply chain are more complex than ever before, incidental to technology being more significant to guarantee efficient and coordinated information flow within the chain. As information sharing becomes essential in supply chain management, it's critical that supply chain members have timely access to whatever information they need.

TIGER ENTERPRISE fully supports procurement, material management and sales distribution processes. In today's world where customer demands and pressures of costs are more challenging, TIGER ENTERPRISE helps you sustain and enlarge your market share, thanks to its supply chain management features.

**TIGER ENTERPRISE Material Management Module** meets your needs to obtain information common to procurement, production, and sales, therefore facilitating effective management of different types of materials traded or manufactured by your company. This application allows a business to trace and manage stock levels and values and easily performs costing and periodic transactions. Allowing you to keep control over your costs, it ensures your company's efficiency.

- Keeps track of material movements between various companies, divisions, plants and warehouses.
- Instantly displays current stock data, allowing you to have easy access to prices and lead times on stocks by suppliers.
- Allocates materials to different locations and manages material withdrawal from warehouses by locations – thank to the application's dynamic stock location management.
- Calculates estimated costs based on bill of materials prior to your proposal.
- Tracks materials in respective categories at multi-level hierarchies and sorts similar materials based on distinctive features – thanks to the application's hierarchical material structure and matrix interface, respectively.
- Keeps costs on target by tracing all inbound and outbound material movements or movements between warehouses via serial and lot numbers.
- Traces materials with an unlimited number of units by means of dynamic unit and dimension definitions.
- Determines stock value and quantity via any method you may designate from various costing options.
- Performs transactions related to outgoing and incoming consignments and return of incoming consignments, reports consignment utilization volume for costing and covering materials out of stock.

**TIGER ENTERPRISE Purchasing Module** works in full integration with Material Management, Inspection Management, Production Management, Finance and General Ledger modules. Depending on the sales order, the application creates production or purchasing orders automatically. Thanks to the integrated receipt, invoice and collection operations, you may set up approval procedures at all stages and control the results of previous stages. These process-oriented features allow the managers of each stage to observe the effects of preceding or succeeding processes instantly, and make right decisions. Inefficiency is alleviated and purchasing costs are reduced, thanks to the automation of internal processes. You'll purchase the right product at the right price at the right time and location.

- Easily reports to relevant departments the quantity of materials or products needed along with the time and the method of procurement.
- Compiles request flows at a single center from different centers, keeping track of material movements between different warehouses.
- Captures the most competitive purchasing terms by evaluating suppliers' prices, lead times and quality and identifies strategic suppliers.
- Fully manages and integrates demand, proposal and purchasing management processes, thanks to the Purchase Proposal Management feature and saves time and costs by moving document flow and approval systems to electronic environments.
- With the "Demand Management" module, it ensures that demands from internal and external customers provide input for planning, and performs planning of procurement and production processes successfully.

**Calculates estimated costs based on bill of materials prior to your proposals!**

Purchasing Module

**Instantly updates current stock data!**

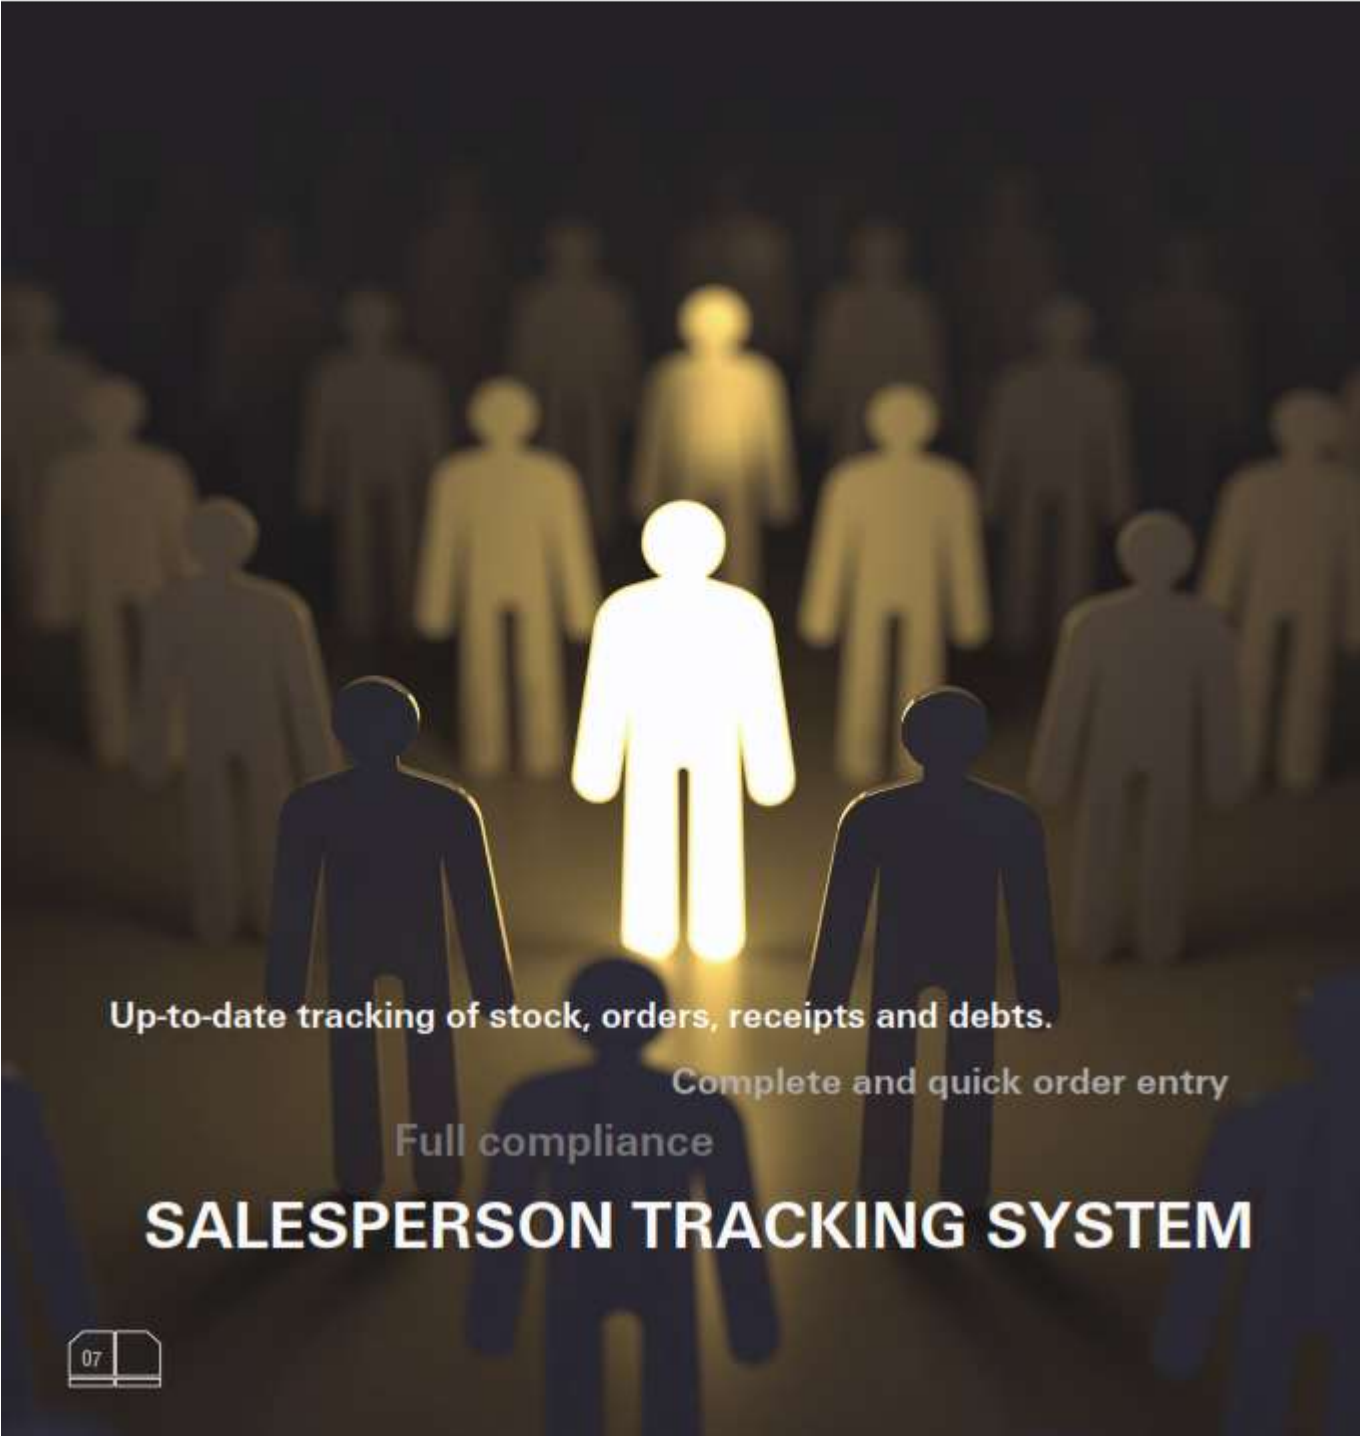

Flexible reporting capability

**EFFECTIVE SUPPLY CHAIN MANAGEMENT**

# EXPERTS' CHOICE

Always unite your forces with the best for better efficiency.

Up-to-date tracking of stock, orders, receipts and debts.

Complete and quick order entry

Full compliance

## SALESPERSON TRACKING SYSTEM

**TIGER ENTERPRISE Sales and Distribution Management Module** allows your company to manage and control processes from proposal to delivery. This feature facilitates all operations from preparing necessary documents at the sales and distribution stages to timely deliveries, from flexible price and promotional terms to tracking salespersons and route planning for delivery vehicles.

The higher the number of product and service options offered by your company, the more critical it is to manage relations with your suppliers, distributors and customers and to run your sales activities more effectively.

**TIGER ENTERPRISE** lets you deliver the products or services your customers need, fast and error-free, thanks to the application's robust data infrastructure.

- Traces operations from order to shipment.
- Tracks the history of customer portfolios, customer data and business relations.
- Sales Proposal Management enables to plan and track sales process as a whole. It tracks activities regarding both planned and prospective sales opportunities. It creates proposals and alternatives related to sales opportunities that reached to proposal phase, and it forms a contract automatically after the proposal is approved.
- Creates an indefinite number of price lists in local and foreign currencies according to customers, validity dates, and payment schedules.
- Boosts the efficiency of sales teams, thanks to its effective "salesperson tracking system."
- Creates separate delivery times as well as delivery and payment terms for each product.
- Monitors the capacity and routes of distribution vehicles for dispatch.
- Defines flexible campaigns likely to enhance the sales efficiency (separate campaigns based on products or campaigns for orders, receipts and invoices in general)
- Keeps up to date on stock, order, waybill and debt information.
- Ensures that materials to be delivered to customers are packaged according to order contents and customer demands.

**TIGER ENTERPRISE Sales Configuration Module** provides the best solutions outright, offering customers several products and service alternatives from your portfolio distinguishing your company from the rest. This module effectively manages variables that come up when different features of your products are assigned different values. Your sales teams can answer various questions from your customers depending on their needs, thanks to the unique interface offered by this application. They find the best product configuration error-free in the shortest possible time. This application allows you to enter your orders within a short time to include all variables or dimensions without leaving anything out what so ever.

## Raise the bar in production, thanks to unique TIGER ENTERPRISE!

Curtailing production times, pulling down costs, enhancing quality and gaining enough flexibility to respond to numerous customer demands, a business has to outperform all these targets just to keep its head above water in today's economic landscape where enterprises are doing whatever it takes to survive.

The planning and logistical functions of the **TIGER ENTERPRISE Production Management Module** facilitate desired efficiency and effectiveness in your production system.

With the **TIGER ENTERPRISE Planning Module**, improve your supply reliability while lessening resource utilization and stock maintenance costs. You can analyze potential problems in advance and implement preventive and corrective actions. Enhance your timely delivery performance without breaking promises to customers. Thanks to the "Planning" module, primary manufacturers and aftermarket players may mutually share their production plans to optimize planning in the supply chain.

# EXPERTS' CHOICE

Always unite your forces with the best for better efficiency.

## Master Production Scheduling

- A flexible tool meeting top-level planning needs
- Offering solutions according to various production environments such as made-to-order production or mass production
- A user-friendly management tool, thanks to a visual design similar to spreadsheet interface

## Material Requirements Planning

- Determines which material is required in what quantity and at what time to complete a timely production, securing material availability and reducing the risk of failure in producing customer orders due to lack of materials.
- A tool providing finite capacity utilization.
- Constantly updates your material requirement plans against any possible changes in production plans, thanks to its net change function.
- Helps employees and managers, responsible for procurement and production, plan their workloads.
- While ensuring the production of the right product, lowers stock costs by eliminating redundant semi-finished products or unnecessary raw material orders.
- Calculates delivery times for orders received by the company, assigns order delivery dates and allows finite capacity utilization thanks to "Capable to Promise (CTP)" feature.
- For made-to-order production, shares updated information about the progress of production orders.
- Thanks to the XML data exchange feature, allows production planning sharing with aftermarket players.

## Capacity Planning

- Capacity requirements needed for the orders to be produced are compared with current status to determine capacity sufficiency in advance.
- Flexible and smart visual scheduling tools determine the capacity to deliver your orders at the times promised based on capacity constraints to allow necessary precautions to be taken beforehand.
- Allows plans to be displayed daily, weekly and monthly.
- Displays plans in Excel, XML and HTML formats and provides printouts.
- Lowers production costs by cutting back on over- or under-capacity utilization.

## Generate the greatest economic value at minimal cost!

The **TIGER ENTERPRISE Production Control Module** is a unique tool to achieve all your basic targets, including timely contacts with end users and increased market share – not to mention producing the highest-quality goods at minimal costs. This module prevents deviations by creating correct inputs for planning, thanks to its logistical planning. And you can fulfill all commitments to your customers, enhancing your reliability. Compare the actual use of materials, labor and machinery with what you've planned and then analyze your production efficiency. Thanks to these features, **TIGER ENTERPRISE** brings you a flexible solution to meet your industry's needs going beyond a restrictive and standard product planning software.

## Product Configuration Management

- Allows control and management in situations where various characteristics and values of materials are combined and different variations unique to each customer are created, i.e., particularly average one-off production in made-to-order industries.
- Automatically creates bill of materials with a complex product configuration that will be produced exclusively for each sale within determined terms and conditions thanks to a user friendly interface.
- Variant code management support eliminates the need for material cards for one-off production and prevents any error attributable to data entry.
- Automates, accelerates and facilitates all related processes such as proposals, orders and production through defined conditions.
- Since there is no need to generate thousands of bills of materials for different products, maintenance costs are reduced significantly.

## Bill of Materials

A Single Bill for Materials for Customer-Tailored Production

# CAPACITY PLANNING

#### Production Orders

- Enables to track and control the production process, thanks to information on utilization of materials, machinery and labor.
- With the "Workstation" feature, if a workstation used for completing a production order is occupied, TIGER ENTERPRISE assigns resources by determining the most feasible time period, considering maximum queue times and facilitating efficient resource utilization.
- Capable of forward or backward scheduling to create a list of materials to be withdrawn from the warehouse, and withdraws material stocks automatically, if requested.
- Enables to track production process with the help of order status and enter production order status in batch.
- Compares projected and actual costs for labor, machinery and resources, identifying discrepancies in production and helps you implement corrective action.
- Reviews the production volume of materials, showing scraps and analyzing production; identifies bottlenecks and overcapacities, allowing you to draft a more efficient plan.

#### Bill of Materials Engineering Modifications and Revisions Operations and Routes

- Defines bills of materials in multi-level product trees.
- Meets requirements of various production environments in a practical and flexible way thanks to certain features such as entering a single bill of material for a product group, formula usage when calculating quantity, usage of pseudo semi-finished goods etc.
- Capable of managing changes over time due to engineering modifications; designs updates in products or customer demands and eliminates cost factors such as incorrect material orders or obsolete materials in stock.
- Provides necessary data for defining labor, workstations, operations and routes as well as for capacity planning.

Forward or Backward Scheduling

Master Production Scheduling

# EXPERTS' CHOICE

## Secure your future management with TIGER ENTERPRISE!

Today finance management is a major topic. If backed by successful finance management, a company controls its investments and loans more effectively. A company can even maximize its revenues while minimizing its capital costs. Moreover, boosting efficiency enhances a company's market capitalization.

**TIGER ENTERPRISE Finance Management Module** is a comprehensive tool that makes cash management more effective, taking into consideration ever-shifting market conditions where businesses have to seek new approaches and methods with every passing day. **TIGER ENTERPRISE Finance Management**, designed on the strength of Logo's experience of over 25 years, employs a structure that can

fully meet both local conditions and requirements and all the financial needs of a global player with international operations. Allowing users to easily draft their financial statements and reports, this feature makes sure that your finance and accounting staff perform their work error-free without wasting time. Updated data is submitted to management in a timely manner.

## Full A

Manage today and the future with

## FINANCE MANAGE

- Allows you to easily define and implement payment terms acceptable to your business, without any need for programming, thanks to flexible features in payment and collection plan definitions.

- Executes all financial transactions in different currencies and automatically calculates debit or credit amounts in equivalent sums in local currencies on accounting slips; creates and documents differences in rounding off figures on the slips as well. All thanks to transaction currency support.

- Tracks and reports all transactions in currencies selected by the company, with its reporting currency option; all financial statements are issued in the reporting currency and in line with international laws governing currencies.

- Automatically calculates and tracks any

increase or decrease in local currencies due to fluctuations in currency rates at the time of currency transactions.

- Calculates debit or credit amounts by using cross exchange rates and executes debt closing transactions between operations performed in different currencies.

- Lists your outstanding accounts and shows payment schedule movements, allowing you to perform risk analysis.

- Manages cash flow, thanks to debt monitoring reports and status and analysis reports; reinforces your long-term relations with suppliers and customers.

- Tracks collaterals such as cash (received/paid), letter of guarantee, check, promissory note, mortgage, share certificate, bond, bill of exchange, etc. By determining risk factors of collaterals (received/issued) it can change

their effect upon the limits of transactions to be performed.

- Applies accurate back payment plans for payments made via credit cards.

- Executes your banking transactions in electronic environments, thus allowing you to save on time and labor, thanks to its LogoConnect Bank feature.

- Sends account (receivable/payable) records and price cards to other companies tracked in the application and facilitates inter-company transactions, send orders and invoices on a one-to-one basis or diagonally owing to its Data Transfer Within Company feature. Uses cross-company transfers to move an order received by one company as an order placed by another company. Similarly, purchase invoices may be transferred as sales invoices.

## All your company records are under protection.

All your company records are safe, thanks to the **TIGER ENTERPRISE Financial Consolidation Module**. Consolidate the assets, liabilities, equities, revenues and expenses of your group companies and display their income and profits as well as expenses and losses as a whole. Thereby, you can inform investors, small investors, auditing officials and other authorities about financial state and activity results of the group, as a whole, by consolidating the assets, liabilities, revenues and expenses as well as non-cash obligations of your individual companies under a single business.

With the **TIGER ENTERPRISE General Ledger Module**, you'll have the opportunity to conduct business in full compliance with applicable laws and international accounting standards. All data that management requires is easily compiled and reported, thanks to cost centers. With the application's project-based running system, high-cost and long-term jobs that require eager chase are handled as a project, making sure that relevant expenses are distributed to correct cost centers; consequently, project costs are tracked and controlled with little or no error. Owing to a two-way audit between operational transactions and accounting records, user errors are minimized and system consistency is ensured. Thanks to the **TIGER ENTERPRISE General Ledger Module**, you can now easily use accounting data not only for official records but also for the company's administrative function.

- Prepares the most suitable chart of accounts and hierarchical structure complying with company structure and requirements.
- Generates financial statements and reports in both local and reporting currencies.
- Displays transaction amounts in local currencies and in reporting currencies separately and displays data for each transaction currency in different lines in the same table.
- Calculates exchange rate differences of each transaction currency for any date range.
- Adds defined areas into General Ledger account cards and slips, when required.
- Tracks different information against accounting slips such as the number of documents, time period, quantity and so on.
- Adapts financial statements such as balance sheets, profit & loss statements, cash flow or profit distribution in line with the company's needs.
- Quickly prepares comparative financial statements.
- Data Transfer Within Company sends General Ledger slips to other companies tracked in the application with a single click. So time is saved by avoiding duplicating accounting transactions performed between companies.
- Allows transferring information such as invoices, orders and receipts between LogoConnect B2B users and commercial system independent users.

## Let your fixed assets be appraised via the best solution!

**TIGER ENTERPRISE Fixed Asset Management Module** allows a business to automate its entire management function from purchase of fixed assets to their sales. Purchasing, sales, payments and collections are managed within an integrated structure.

Just as vital as recording the fixed assets of a business, this application is vital to tracking their physical condition, keeping track of their locations and carrying out all related operations in a comfortable and easy way.

**TIGER ENTERPRISE Fixed Asset Management Module** allows you to set up a management system to easily track and control your operations involving fixed assets.

In addition to general information for tracking and appraising your fixed assets, other details such as purchasing date, cost and depreciation rate, type and period are tracked as well. The quantity of fixed assets available at any time as well as input or output transactions in relation to these records is easily traced. Where inflation accounting is applied, you can make fixed asset inflation adjustments and depreciation adjustments. Records are updated by adjustment differences.

- Supports both regular depreciation and declining balance methods for depreciation applications.
- Applies partial depreciation for company vehicles, considering the number of months between purchase date to year-end.
- Updates depreciation accounts over value resulting from the revaluation.
- Revaluates fixed assets for local companies that keep records according to balance sheet procedures as well as for companies abroad.
- States whether already performed expense transactions are considered in revaluation.
- Performs calculations against the new value of fixed asset to update the depreciation, if requested.

# EXPERTS' CHOICE

Always unite your forces with the best for better efficiency.

## On a Local Scale to a Global Scale on the Back of Foreign Trade

Thanks to the **TIGER ENTERPRISE Foreign Trade Module**, you can track and plan your foreign trade operations from a single source and track your activities in an effective and efficient way in compliance with applicable laws. The Foreign Trade Module of TIGER ENTERPRISE is compatible with all business processes including sales, procurement, finance and accounting and allows you to track FX, Eximbank and incentive credits as well as Inward Processing Permission Certificates in minute detail. You can track your cost on depot-storehouse basis and exchange data online with both public and private agencies, when required.

- Facilitates quick access to necessary data after defining system country codes for countries involved in mutual trading, bank codes, free zones, customs, payments and delivery terms as well as carriage and country types
- Upload Customs Tariff Statistics Position (CTSP) numbers to the program to facilitate tracking imports and or exports.

## TIGER ENTERPRISE tools relieve workloads, enhance control and make life easier.

TIGER ENTERPRISE offers many tools to help you save time during day-to-day operations and minimize errors, lessening the burden of tracking and controlling tasks.

**Workflow:** This tool defines workflows and approval mechanisms among all company processes to establish a healthy communications structure between staff members and departments. Thanks to this automation, operations are now conducted fast and error-free. The application boosts efficiency and profitability. Processes are planned and traceable, able to be monitored. Eliminating document and telephone traffic, Tiger Enterprise makes it possible to track and manage processes in electronic environments and to send warning e-mails to users for faulty or incomplete jobs.

**Project Tracking:** This tool allows you to monitor all kinds of material, service and financial movements for all jobs handled as a project starting from the offer stage, and it makes it possible almost without any effort to track, control, and report multiple projects simultaneously.

**Document Management:** This tool mails required documents to keep track of them online – thanks to a feature that links documents to records. Consequently, time, effort and costs for printouts, reproduction, filing and archiving documents are minimized, resulting in the most efficient and successful use of information.

**Task Scheduler** manages all of your operational work and runs your scheduled tasks automatically when the time is right and sends alerts at the beginning and end of each task. Moreover, this tool e-mails all results to the relevant parties as soon as a task is completed. Thanks to Task Scheduler, which is integrated with the reminder, electronic mail and messaging functions, you can send messages internally. Owing to these fantastic features, many routine operational tasks completed during the day are automated, allowing you to save time and concentrate on more strategic tasks.

## Logo Human Resources Module – Turning your distinctiveness into advantage

Working with TIGER ENTERPRISE in an integrated way, the Logo Human Resources Module lessens the workload of your HR staff, thanks to this application's flexible and comprehensive structure that effortlessly responds to all your needs. This module creates various analyses, showing managers the way to tactical and strategic decisions.

## Get the right information at the right time to make right and timely decisions!

Information is the most important power in the business world; however, unless you analyze it correctly, the information becomes nothing more than a confusing bulk. Thanks to ever-developing technology, companies may ensure information flow from various sources; however, effective reporting is still a very important obstacle that many enterprises should overcome, given the fact that information's contribution to decision making is nothing unless correctly processed.

The sophisticated reporting technology of TIGER ENTERPRISE allows you to clearly find your way in the face of your targets and to undertake risk management by foreseeing risks in advance. Make clearer strategic decisions related to risks and opportunities. Minimize operational shocks and boost your corporate efficiency with more effective applications.

## See the bigger picture thanks to management decision support systems!

State-of-the-art technology introduced by **TIGER ENTERPRISE** for excellence in analysis and reporting is management decision support systems. Analyze your data in multi-dimensions, thanks to Navigator Plus. Filter the most complex data and effortlessly obtain important strategic data. These solutions give managers and analysts – tired of struggling with details – a quick look at data to answer questions like "who" and "when," not to mention "why" and "if." Whenever you wish to look at a report of a labor-intensive product from a different angle, you never have to go back to the beginning and struggle with endless report updates over and over again.

## Unlimited Freedom with Customization Tools

Because of different industry needs and needs tailored to different companies, businesses occasionally require various changes or adaptations of ERP solutions. Thanks to Customization Tools offered by Logo, you can easily introduce these changes. Either create customized changes for your internal needs by using Logo Customization Tools or use modifications developed by Logo Solution Partners with the help of Logo Customization Tools.

With Logo Customization Tools, you're guaranteed low proprietary costs and fast applications features for your product to meet the needs of your company; these features will fully comply with your operational system requirements. Easily implement industry-unique solutions. Changes made by using Logo Adaptation Tools may be easily upgraded to newly released versions and version updates of TIGER ENTERPRISE.

## Interface Customization

Without having to be familiar with any programming language, easily design screens compatible with how you do business, thanks to TIGER ENTERPRISE. Add new areas to cards and perform list searches by using these areas.

#### Report Design Tool

Easily obtain standard reports to help you in your decision-making processes without any programming and draft specific reports in a short time without any need for consultancy whatsoever. Introduce various visual changes in your reports; use drawings and graphics such as corporate logo; add new areas, thanks to enhanced formulas; e-mail reports, invoices, orders, and more to other users.

#### Report Generator

Get access to any information stored in product databases with queries and get results with TIGER ENTERPRISE Report Generator. Design reports to meet all kinds of needs. Thanks to "Table Reports" with enhanced content for practical use, you can extensively analyze the information entered into the system with a little assistance from queries without the need of using SQL. Get the information you need to make the right decisions so that your company becomes more flexible.

#### Manager Dashboard

TIGER ENTERPRISE offers reporting solutions fulfilling all kinds of needs. By using "Manager Dashboards", managers can access to summary information regarding the company's real-time position instead of detailed reporting; minimize and control risks by constantly viewing full and verified information. Customize all indicators according to your needs; access data such as the stock and credit turnover rates, bank and cash positions, checks and promissory notes to be issued for collection and sales with Momentary Indicators window. By using the relevant windows, keep an eye on the quantity and amount of the bestselling products and current amounts in bestselling product accounts.

Always unite your forces with  
the best for better efficiency.
